

TapNet is a service where you administer and monitor your stations - in real time. All you need is a computer or tablet with internet access.

Administration

Use TapNet to administer your stations, prices, cards, tags and transactions in an easy-to-use web-based interface. Export transactions to your ERP system or print invoices directly from TapNet.

Examples of functionality:

- Set-up customer groups and discount groups
- Set limits per customer and/or per card
- Order cards, individually or in a batch
- Suspend a customer or a card temporarily or permanently
- Batch invoicing, accounting and invoicing reports
- Reconciliation of fuel volumes, filling and dispensing (per tank)
- Quick filters for lists of customers, dispensing, cities and tanks
- Export reports in PDF or Excel format

Monitoring

Monitor your stations remotely and get notified when something needs your attention, for example if the receipt printer is running out of paper or the fuel level is low in a tank.

All alarms can be sent by either e-mail or as a text message to one or more recipients.

Everything is included

TapNet is a cloud-based service, which means you always have access to the latest version and don't have to pay extra for updates or hosting. As a TapNet customer you always have access to the complete functionality. There is no extra fee to pay when you want to start using additional modules. Use TapNet on as many devices as you want - exactly when and where it suits you.

Connecting equipment and systems

Terminals, tank gauging, POS systems, price signs etc. are connected to TapNet either through a dedicated line or using a 3G or 4G router.

Contact CODAB for more information about compatibility.

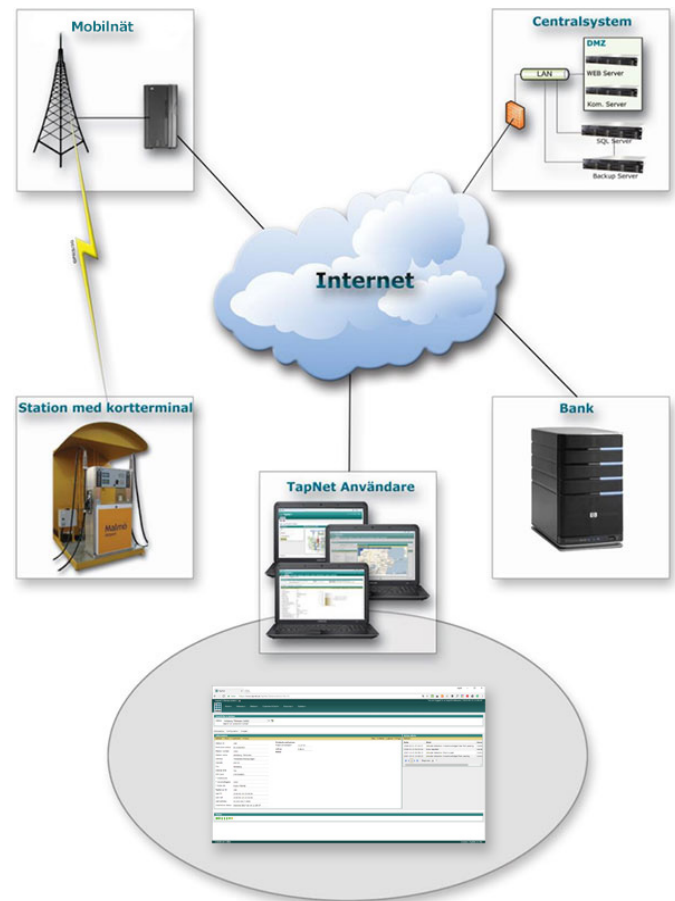

Support & help functions

When you sign up for TapNet you get access to free and unlimited phone support during workdays and a web based introduction course for new users. There is also a built in help function and printable user documentation.

Hosting and security

TapNet is hosted at a data center that fulfils high requirements on security. The system has 24/7 surveillance, 365 days per year. Backups are made according to a set schedule.

All users have separate logins and access only to their own systems and data.

Technical support

We provide personal technical support adapted to your requirements. We have long and vast experience in managing both old and new equipment from many different suppliers. We will help you get all parts of your system working together.

Welcome to CODAB!
